

In order for the Curtain Baskets to operate smoothly, begin by positioning the Gearbox Crank Arm so that it is in the vertical position as shown. For proper adjustment position a torpedo level on the Crank Arm and Basket Arm as shown to ensure an EXACT horizontal level is achieved as shown. Adjust the Basket Arm position by twisting the T bolt bushing connected to the Crank Rod by either shortening or lengthening the Crank Rod until this vertical positions are achieved.

The Crank Arm and the Basket Arm **MUST** be adjusted so that they are **PARALLEL** with each other. Operate curtain for 15 minutes and check for smooth operation. Repeat the steps if smooth operation is not achieved.
